

Developer Guide: Journey-Based Testing

1. Review the folder containing the excel file with the selected Journeys.
2. Go through all assigned Journeys.
3. While completing each Journey, fill in the 'Time Spent (min)' column for each step separately.
4. On the "Metrics" tab, provide overall feedback after completing all Journeys. Fill in the columns: Score, Comments, and Bugs.

Score:

For each step, refer to the Min and Max Score columns and select a value within this range.

Comments:

Comments should be clear for all stakeholders and sufficiently detailed for you could start fixing the issue yourself if required.

Avoid overly brief comments.

Comments are mandatory if the score is less than 4.

Commented [VVI]: comment is always mandatory, add link to defect if applicable

Bugs:

- If you discover a defect while going through a Journey, please create and describe it here: <https://github.com/tenstorrent/tt-metal/issues>
- Add the link to the created bug in the table next to the corresponding step.
- When you create a bug, please add the label **EPAM_DX**, if you can't add label, please put it in the comments

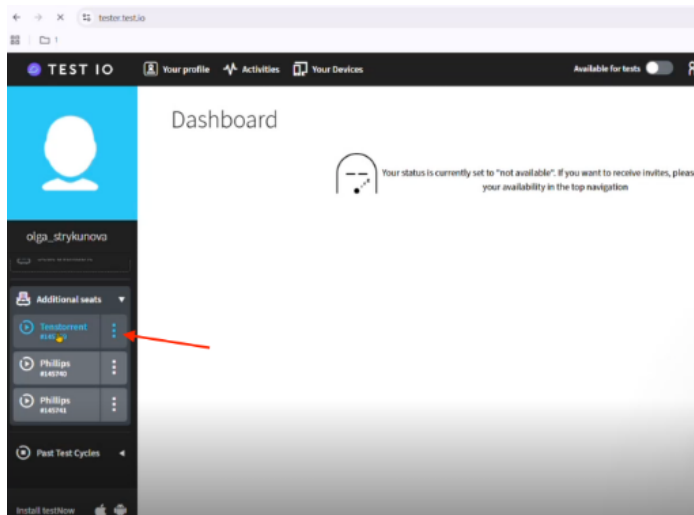

5. Time Tracking

It is important to note that the time recorded in the system will be shared with the client, so they can understand how long it takes to complete each Journey. This does not affect your payment, as compensation is fixed per Journey.

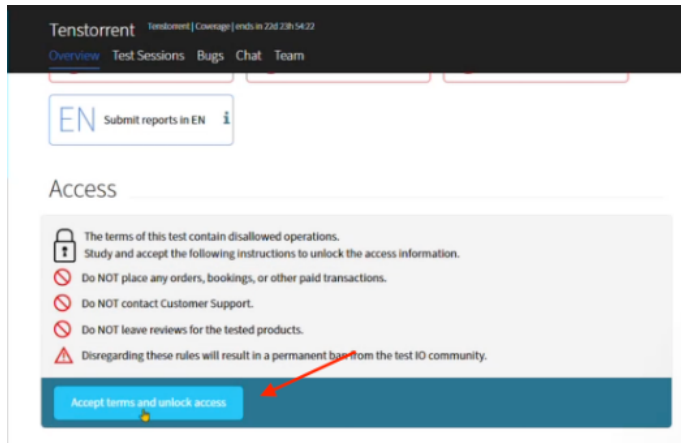

How to Log Your Time:

- Log in here: <https://tester.test.io/>
- Notify the coordinator (hanna_makarava@epam.com) once you have logged in, so you can be added to the current testing cycle.
- On the left side of the platform, you will see a cycle named "Tenstorrent."

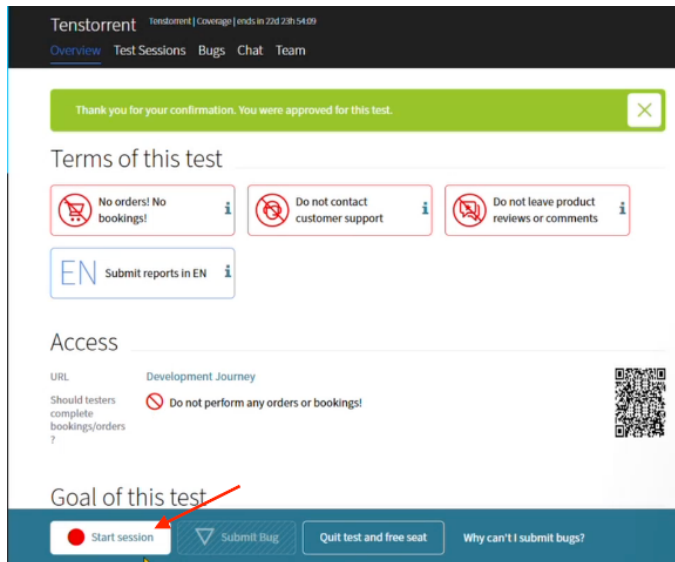

- Click on this cycle.

- Click on "Accept terms and unlock access."

- Before starting your testing, press "Start Session." More information about the TestIO platform can be found here: <https://academy.test.io/en/articles/4701335-test-session-testing>

- In the pop-up window, you need to fill in two fields:
 - **Estimated time I will test:** Enter the estimated time you plan to spend testing the current Journey. Please note that you cannot pause the session, only stop it. However, you can create an additional session or extend the current one if needed.
 - **What are you planning to test and how?:** Enter the number of your Journey, for example, DJ_1.
 - Please track all time that you spend on the task
- 6. After you finish the task, please add your code to the same folder where the Excel file with the Journeys is located.

7. Support and Questions

If you have any questions regarding access or completing the Journeys, please contact Yury Nikanchyk (yury_nikanchyk@epam.com).
